

**BROWNING KNIVES: A POINT OF PRIDE**

## NOT ALL KNIVES ARE CREATED EQUAL

As with our famous firearms, we build our knives to do a job, do it better, and do it longer than any other. Knives, like guns, are a point of pride. The Browning philosophy of knife-making is simple: No shortcuts. We use the very best materials and the most functional designs combined with traditional hand crafting.

Our 504 Big Game model (shown above) exemplifies our passion for perfection. Few knifemakers are willing to devote the extra effort to transform raw components such as these into a piece of functional art.

Blades utilize the finest, tempered, heat-treated 440C-type stainless steel for the qualities favored by custom knifemakers: the ideal

balance between optimum edge retention and easy sharpening, combined with superior corrosion resistance. Cutting blades are hand-polished to a high lustre sheen that looks beautiful and easily wipes clean.

All components are deburred before assembly for smoother fits. Blade separators offer long term rigidity, protection, and blade alignment. Hand polishing visually blends the brass pins and bolster material into one solid surface. Unlike many competitors, our Sambar stag scales are attached with rivets *and* special cement to prevent loosening over time. Even the blade springs utilize durable stainless steel.

Before you buy, compare Browning quality. Compare Browning function. Compare Browning design. Not all knives are created equal—and Browning knives simply have no equal.

## LIMITED EDITION KNIVES

Browning is proud to offer a **Limited Edition Model 53** knife to complement the commemorative Model 53 Lever Action Rifle. The Sambar stag handle is contoured for a comfortable, secure feel in your hand. The full tapered tang is encircled with a handsome alternating pattern of file marks. The hollow ground blade is high carbon stainless steel and the hilt and pommel are of nickel silver. It is supplied with a form-fit leather sheath and a suede leather presentation pouch. Only 2,000 will be made. Reserve yours now.

The **Limited Edition Model 65** is the perfect companion to the Browning Model 65 lever action rifle. The three-inch blade is hollow ground in a traditional drop point design. Handles are genuine Sambar stag. This edition was limited to 1,500. Like its namesake rifle, very limited numbers remain.

The **Damascus Classic Fighter** fits naturally in your hand as only a "fighting" design can. The blade is of beautifully figured Damascus, forged with over 200 layers of laminated steel. The handle is of exotic cocobolo wood. Walnut presentation case included. Only 1,000 of these individually numbered knives were commissioned and only limited numbers remain.

The **Double Edge Damascus Hunter** was designed by famed American knife-maker Gil Hibben. The blade is beautifully figured with 200 layers of pure nickel and high carbon stainless steel blended in the Damascus process, then free-hand ground to a razor edge. The cocobolo wood handle contrasts against the polished bolsters. Fitted in a walnut presentation case. Very limited numbers of the original 1,000 remain.

The image shows three folding hunting knives arranged vertically on a red, black, and white plaid fabric background. The top knife, labeled 504, is a multi-tool with a curved handle, a thumb hole, and a blade with a saw-tooth edge. The middle knife, labeled 507, has a straight handle and a single blade. The bottom knife, labeled 506, has a curved handle and a single blade. All knives have dark, textured handles and gold-colored metal bolsters and liners.

## TRADITIONAL FOLDING HUNTING KNIVES

The Big Game™ 503 and 504 are perhaps the most imitated knives ever made — but there is a big difference between the imitations and the originals. To tell the difference examine the quality of the scale material and its fit to metal parts. Each of the three blades fit tightly without side-to-side play, and are built to stay tight over years of use. Each blade has a special purpose: a saw for cutting bone, a

blunt end blade for separating hide without cutting into entrails, and a trailing point blade for skinning. The saw blade features our unique blade-to-back taper design for reduced drag. Both Big Game knives are big enough to do the job—without being bulky.

Both the 506 and 507 Stalker and the 501 and 502 Fish and Bird models exhibit the same quality. The wood and sambar stag handle scales are the finest available. Blades are of superior 440C-type stainless steel. (See chart on pages 14 and 15 for specifications.)

## **NEW FEATHERWEIGHT™ COMPOSITE SERIES**

There has never been a series of knives like our new Featherweight Composites. These knives weigh as little as some sheaths, yet they are designed for hard work — real hard work. To prove these knives have what it takes we provided them to several wildlife resource wardens. They found that the blade thickness and taper was superior to any knives they had ever used. They took an edge better and held it longer. One officer dressed and skinned two moose and an elk before needing to resharpen his knife.

They feature high impact resistant composite frames with laminated wood inserts. Handle to blade fit is solid and tight, yet allows easy opening. You must heft them to believe how light they are: the three blade Big Game version barely passes four ounces, while the Model 803 is an incredible 1/2 oz.

## **LIGHTWEIGHT KNIVES**

Not all lightweight, composite knives are created equal. Browning Lightweights have a solid secure locking mechanism that locks the blade tightly when open and prevents side-to-side play. With Browning there are no gaps between the blade lock and handles. Each comes with a Cordura sheath. Choose from a medium drop point or a compact fillet model.

## PRESENTATION LOCKBACKS

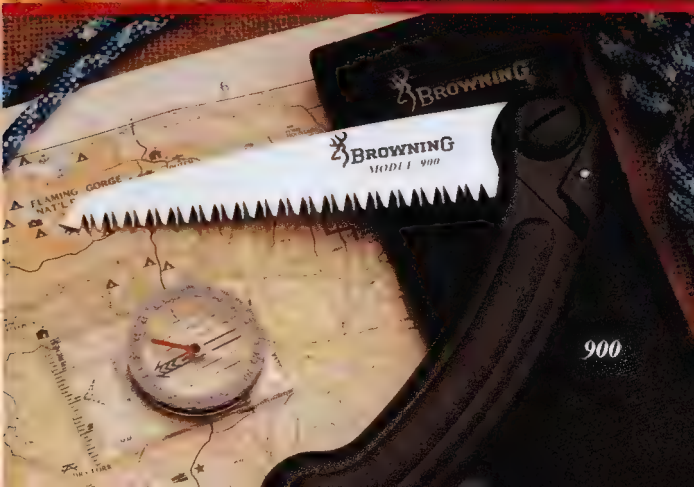

These are the kind and quality of knives you'll enjoy keeping in your pocket all the time. Unlike other similar knives you'll find no gaps between the scales and frame. All blades audibly snap into place upon opening. Edges are smooth and styling is handsome. Choose from wood, stag or stainless scales.

## TRADITIONAL POCKET KNIVES

These smoothly sculpted gems won't snag in your pocket. The multiple blades make them versatile for dressing small game or around camp chores. Our superior design and workmanship is evident in the "Walk 'n Talk" crafting — blades snap open and closed sharply yet smoothly. The top quality 440C-type blade steel is considered too expensive for competitors knives. Genuine rosewood scales.

## CLASSIC FIXED BLADE HUNTERS

We feel confident that there have never been knives with greater balance and handling characteristics than the 720 and 721. Both feature tapered tangs and hollow ground 440C-type stainless blades. The new 721 has a trailing profile ideal for skinning. The 720 features an all-purpose drop point blade. Both are supplied with custom fit leather sheaths.

## FEATHERWEIGHT™ DIAMOND HONE

Incorporates the quick sharpening capabilities of diamonds in an ultra-light takedown design. You can quickly put an edge on even the dulllest knife. Even sharpens serrated edge knives. The patented EZE-LAP® Bonded Diamond Surface ensures many years of trouble-free service. Ballistic Cloth sheath included. Black anodized alloy handle. Weight: 2 oz.

## FOLDING GAME AND CAMP SAW

Browning's Folding Game and Camp Saw is a lightweight, extremely durable folding saw with specially designed off-set teeth for rapid cutting. It's especially suited for quartering deer, around-camp projects, and cutting green limbs when setting up your tree stand. The self-cleaning blades are quickly replaceable. Extra blades are available.
